MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, **MARANTZ** company has created the ultimate in stereo sound. Only original **MARANTZ** parts can insure that your **MARANTZ** product will continue to perform to the specifications for which it is famous.

Parts for your **MARANTZ** equipment are generally available to our National Marantz Subsidiary or Agent.

ORDERING PARTS :

Parts can be ordered either by mail or by Fax.. In both cases, the correct part number has to be specified.

The following information must be supplied to eliminate delays in processing your order :

1. Complete address
2. Complete part numbers and quantities required
3. Description of parts
4. Model number for which part is required
5. Way of shipment
6. Signature : any order form or Fax. must be signed, otherwise such part order will be considered as null and void.

SHOCK, FIRE HAZARD SERVICE TEST :

CAUTION : After servicing this appliance and prior to returning to customer, measure the resistance between either primary AC cord connector pins (with unit NOT connected to AC mains and its Power switch ON), and the face or Front Panel of product and controls and chassis bottom.

Any resistance measurement less than 1 Megohms should cause unit to be repaired or corrected before AC power is applied, and verified before it is return to the user/customer.

Ref. UL Standard No. 1492.

In case of difficulties, do not hesitate to contact the Technical
Department at above mentioned address.

Servicing the DR-17

1. INTRODUCTION:

The DR-17 is the consumer version of a CD recorder, this means that the SCMS (Serial Copy Management System) is included. The DR-17 can only record on the Audio CDRs (Consumer Use).

The DR-17 is suitable for recording and playback of CD-RW discs (CD-Re Writable disc).

Playback & Recording and Disc

<div>Disc</div> <div>Player/Recorder</div>	CD	CDR				CD-RW				SCMS

2. OPENING THE PRODUCT:

The product can be opened by removing the top cover (8 screws). Once the product is opened one can have access to the several PCB's and the main module. To have access to the Display PCB, the Headphone PCB and the lever PCB first the front cover has to be removed (See dismantling instructions on page1-7).

Below the several PCB's and it function and service policy will be discussed:

2.1 CDR loader (CDR main module CDL3610/01):

This complete CDR loader is considered as not repairable in the field. therefore this module will be repaired centrally. A module exchange procedure will be set up for this purpose. The module can be removed from the product by removing 10 screws and the transformer (see demounting the CDR module on page 1-7), and loosening the connectors.

This module is the complete CD recorder, it contains the following parts:

- “ CD Mechanism (CDM3610'). Underneath this mechanism a PCB is mounted which is adjusted to the mechanism (laser current settings are stored in EEPROM).
- “ Loader Assy. This mechanical assy takes care for the tray control.
- “ Main PCB. This PCB takes care that the (analog or digital) signal to be recorded is converted into a suitable signal which can be recorded on the disc.

Digital signals with an other sampling frequency then 44.1kHz will be converted in the sample rate converter (GDIN) to 44.1kHz.

Analog signals will be first converted into a digital converter by the AD converter.

This PCB also takes care that the signal from the CD (playback) is converted into a suitable digital signal (or analog via the DA converter).

The main microprocessor controls the several functions of this PCB. The system software stored in a normal DIL EPROM(7322). This EPROM(7322) is mounted on a socket, so software updates can be easily done at the dealer or service agent.

2.2 Power SW Board.

This PCB contains the Power SW, which is jointed the Power bottom on the front panel. All parts are available as spare parts.

2.3 Power Supply and Audio Board.

This PCB consists of power supply part and audio part. The power supply part delivers the several voltages for the different PCB in the DR-17. On this power supply several fuses (secondary side) are mounted on this PCB. The audio part takes care that the signal from CDR main module is converted into an analog signal via DA converter and outputs the analog signal. This PCB contains the output and input connectors also. All parts are available as spare parts.

2.4 Display Board.

This PCB contains the Display, which informs the user about the status of the recording/playback process and it also takes care for scanning the keys on the front panel. The information from the keys is fed via a I²C connection to the main microprocessor on the CDR loader module. Information which needs to be displayed is also fed via this I²C line from the main microprocessor on the CDR loader module to the display controller.

The parts for this PCB are available as service parts so this PCB can be repairable up to component level.

2.5 Headphone Board.

This PCB contains the headphone socket and potentiometer which controls the headphone volume. All parts are available as spare parts.

2.6 Analog Input Board

This PCB contains the analog input (RCA) connector. All parts are available as spare parts.

2.7 Level Board.

This PCB contains the potentiometer to adjust the level of the analogue input signal. All parts are available as spare parts.

2.8 Motor Board.

This PCB takes care for the tray speed control. All parts are available as spare parts.

3. TEST PROGRAMS.

The DR-17 has two built in test programs. These are the "**Dealer Diagnostics**" and the "**Service Diagnostics**". Both diagnostics can be used to determine which board or module is defect.

3.1 Dealer Diagnostics.

This test diagnostics the communication between the several ICs in the CDR module. To start the test press the buttons **<PLAY>+<STOP>** simultaneously and switch on the power.

During this diagnostics the message "BUSY" is blinking on the display (this can last for a couple of minutes). When an error is detected the message "ERROR" is displayed. For the meaning of this error the service diagnostics has to be ran. Since no CD is used for this test, the playback and record parts of the module are not tested thoroughly.

3.2 Service Diagnostics.

This Diagnostics tests the main board and CDM assembly (also known as Basic Engine) of the CDR module and the keyboard and display board.

If an error is detected, an error number is displayed which refers to the error.

The test is executed with a normal CD loaded, so the recording part of the CDM is not tested thoroughly.

To start the test press the keys **<PLAY>+<NEXT>** simultaneously and switch the power on.

See the attached sheet for a flowchart of the "**SERVICE TEST PROGRAM**".

1.2 WARNINGS

(GB) WARNING

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, make sure that you are connected with the same potential as the mass of the set via a wristband with resistance. Keep components and tools at this potential.

ESD

(F) ATTENTION

Tous les IC et beaucoup d'autres semi-conducteurs sont sensibles aux décharges statiques (ESD). Leur longévité pourrait être considérablement écourtée par le fait qu'aucune précaution n'est prise à leur manipulation. Lors de réparations, s'assurer de bien être relié au même potentiel que la masse de l'appareil et enfilez le bracelet seri d'une résistance de sécurité. Veiller à ce que les composants ainsi que les outils que l'on utilise soient également à ce potentiel.

(D) WARNUNG

Alle ICs und viele andere Halbleiter sind empfindlich gegenüber elektrostatischen Entladungen (ESD). Unsorgfältige Behandlung im Reparaturfall kann die Lebensdauer drastisch reduzieren. Sorgen Sie dafür, daß sie im Reparaturfall über ein Puls-armband mit Widerstand mit dem Massepotential des Gerätes verbunden sind. Halten Sie Bauteile und Hilfsmittel ebenfalls auf diesem Potential.

(NL) WAARSCHUWING

Alle IC's en vele andere halfgeleiders zijn gevoelig voor electrostatische ontladingen (ESD). Onzorgvuldig behandelen tijdens reparatie kan de levensduur drastisch doen verminderen. Zorg ervoor dat u tijdens reparatie via een polsband met weerstand verbonden bent met hetzelfde potentiaal als de massa van het apparaat. Houd componenten en hulpmiddelen ook op ditzelfde potentiaal.

(I) AVVERTIMENTO

Tutti IC e parecchi semi-conduttori sono sensibili alle scariche statiche (ESD). La loro longevità potrebbe essere fortemente ridotta in caso di non osservazione della più grande cauzione alla loro manipolazione. Durante le riparazioni occorre quindi essere collegato allo stesso potenziale che quello della massa dell'apparecchio tramite un braccialetto a resistenza. Assicurarsi che i componenti e anche gli utensili con quali si lavora siano anche a questo potenziale.

1.4 DISMOUNTING INSTRUCTION

1. DISMOUNTING CDR LODER

- 1) Remove 8 screws (**002D** & **003D**) from the top cover.
- 2) Remove the top cover (**001D**).
- 3) Disconnect connector cables from **J801** and **JH04**.
- 4) Remove 4 screws (1-4), and remove the mains transformer (**L001**).

- 5) Come out (Open) the CD tray by manually.
- 6) Remove the CD tray lid (**050B+052B+062B**).

- 7) Remove screw (5) from the bracket (**004B**).
- 8) Remove 4 screws (6-10).
- 9) Disconnect all cables from connectors (**JF02**, **1330**, **1410**, **1400**, **1430** and **1440**).
- 10) Disconnect cables from connectors (**J891** and **J892**), and remove PCB **P816**.
- 11) Connect the cables from "TRAY MOTOR" to the connector **1104**.
- 12) Remove the cable shield (**003X**) from the top frame

REMARK: When replace the CDR loader module CDRL3610' to the new one. It is necessary to cut left side of the top frame by the hand nibbler. (Height 2mm x Width 6mm)

2. DISMOUNTING ADDITIONAL CABLES

De-soldering and remove cables from the loader PCB.

REMARK: When replace the CDR loader module CDRL3610' to the new one. It is necessary to add removed cables at same positions as follows;

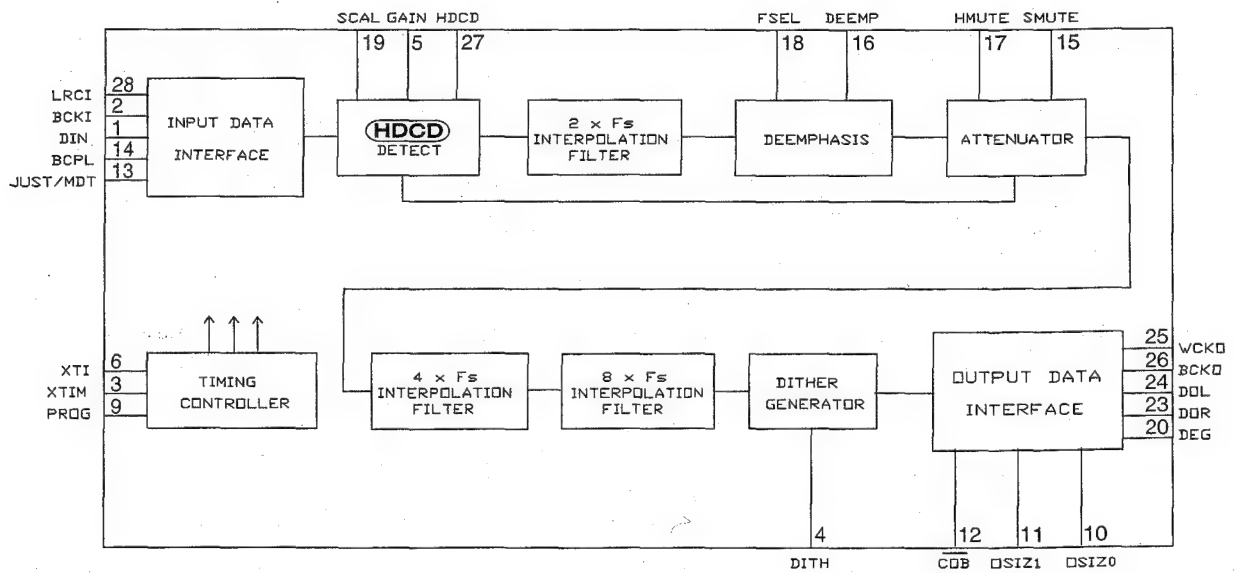

- BROWM Pin 9 of IC7323
- RED Pin 12 of IC7323
- ORANGE Pin 15 of IC7323
- YELLOW Test Point beside 3149
- BLACK Pin 7 of IC7240 and Pin 7 of IC7241

HDCD Technology

HDCD - High Definition Compatible Digital - is a patented process for delivering on digital media the full richness and detail of the original microphone feed. When listening to HDCD recordings, you will hear more dynamic range and very natural vocal and musical timbre. With HDCD, you get the body, depth and emotion of the original performance - not a flat, digital image.

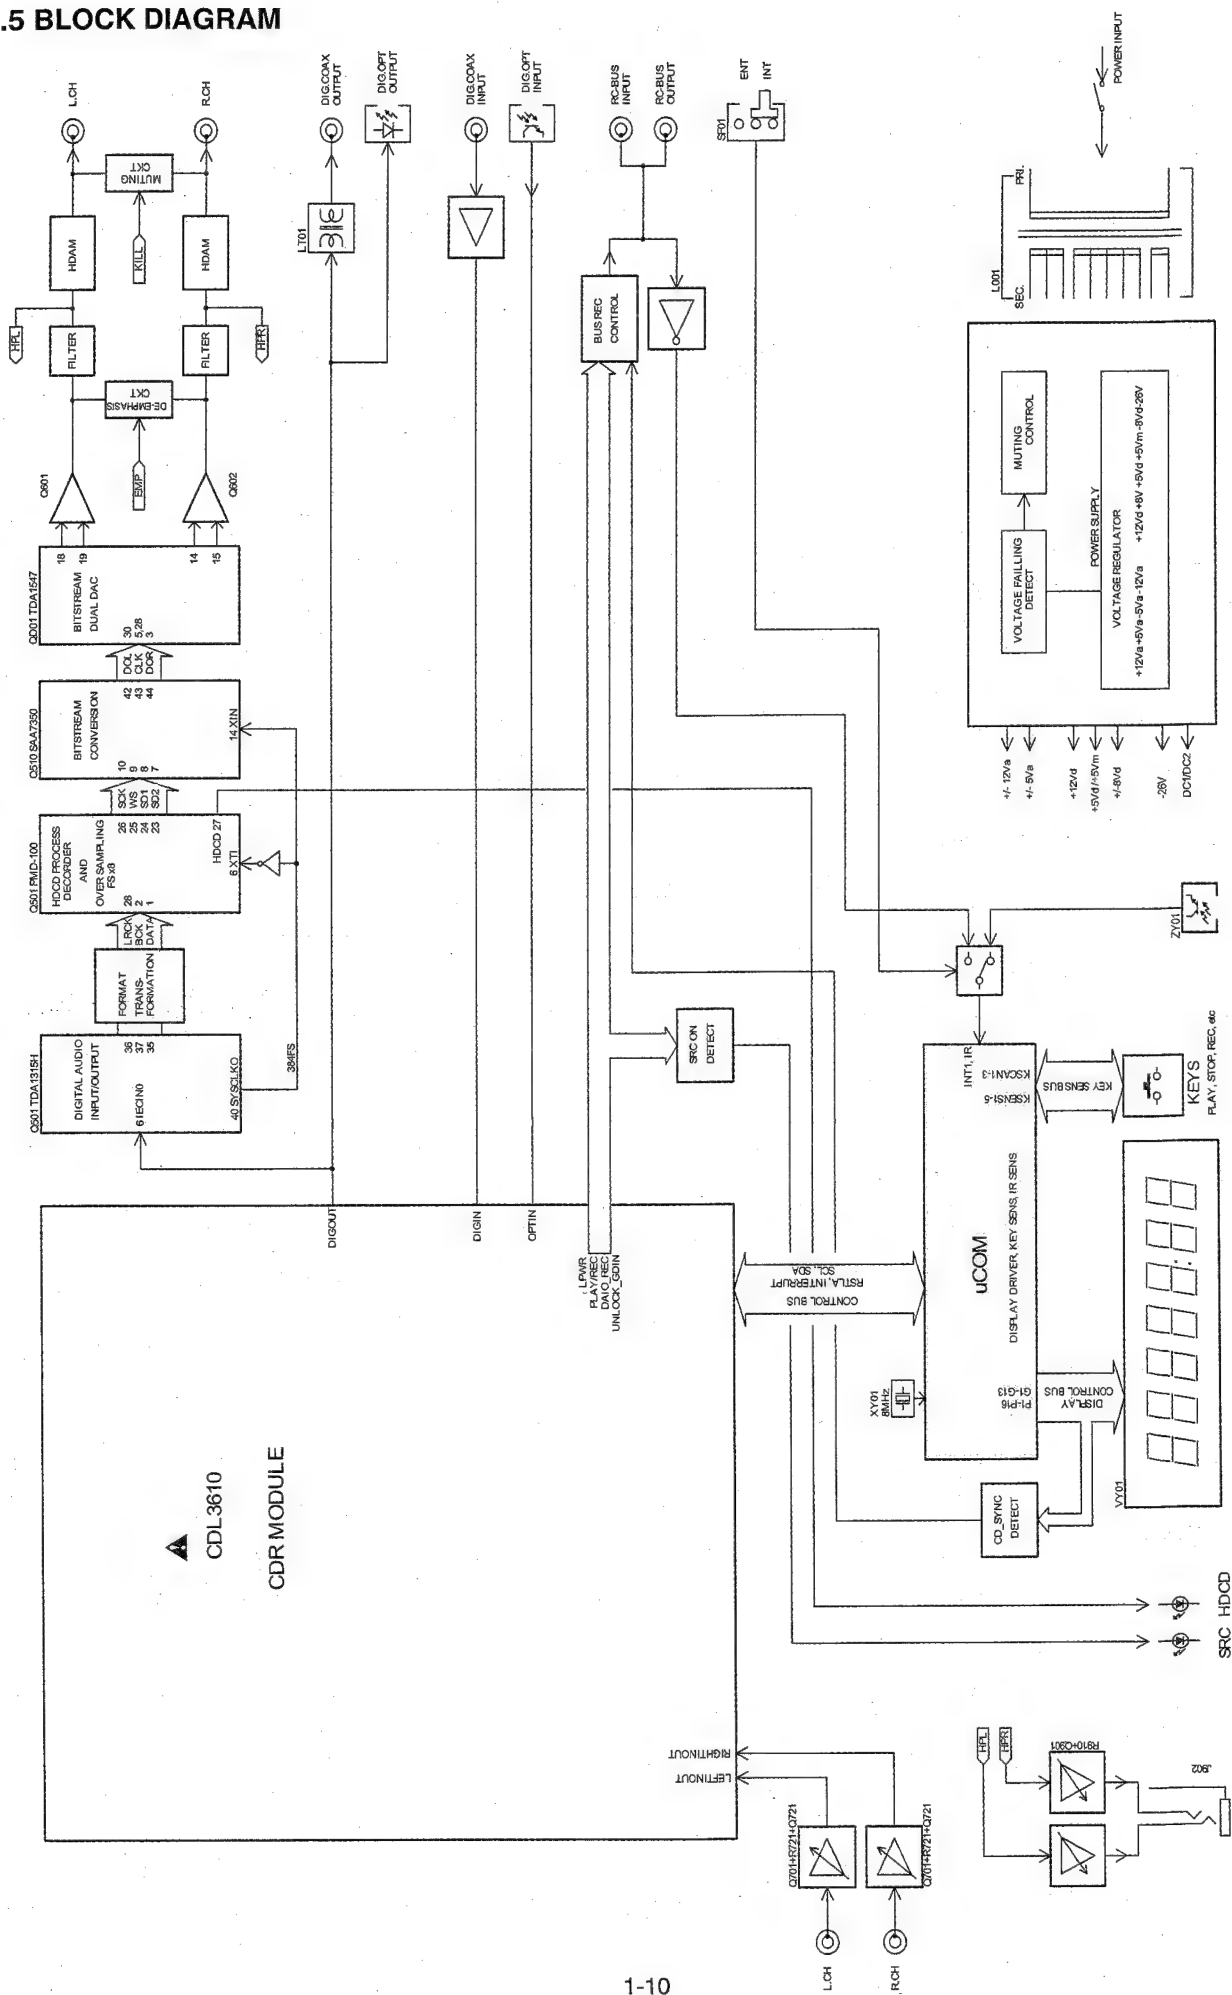

HDCD encoded CDs sound better because they are encoded with 20 bits of real music information, compared to 16 bits for all other CDs. HDCD overcomes the limitations of the 16-bit CD format by using a sophisticated system to encode the additional the CD format.

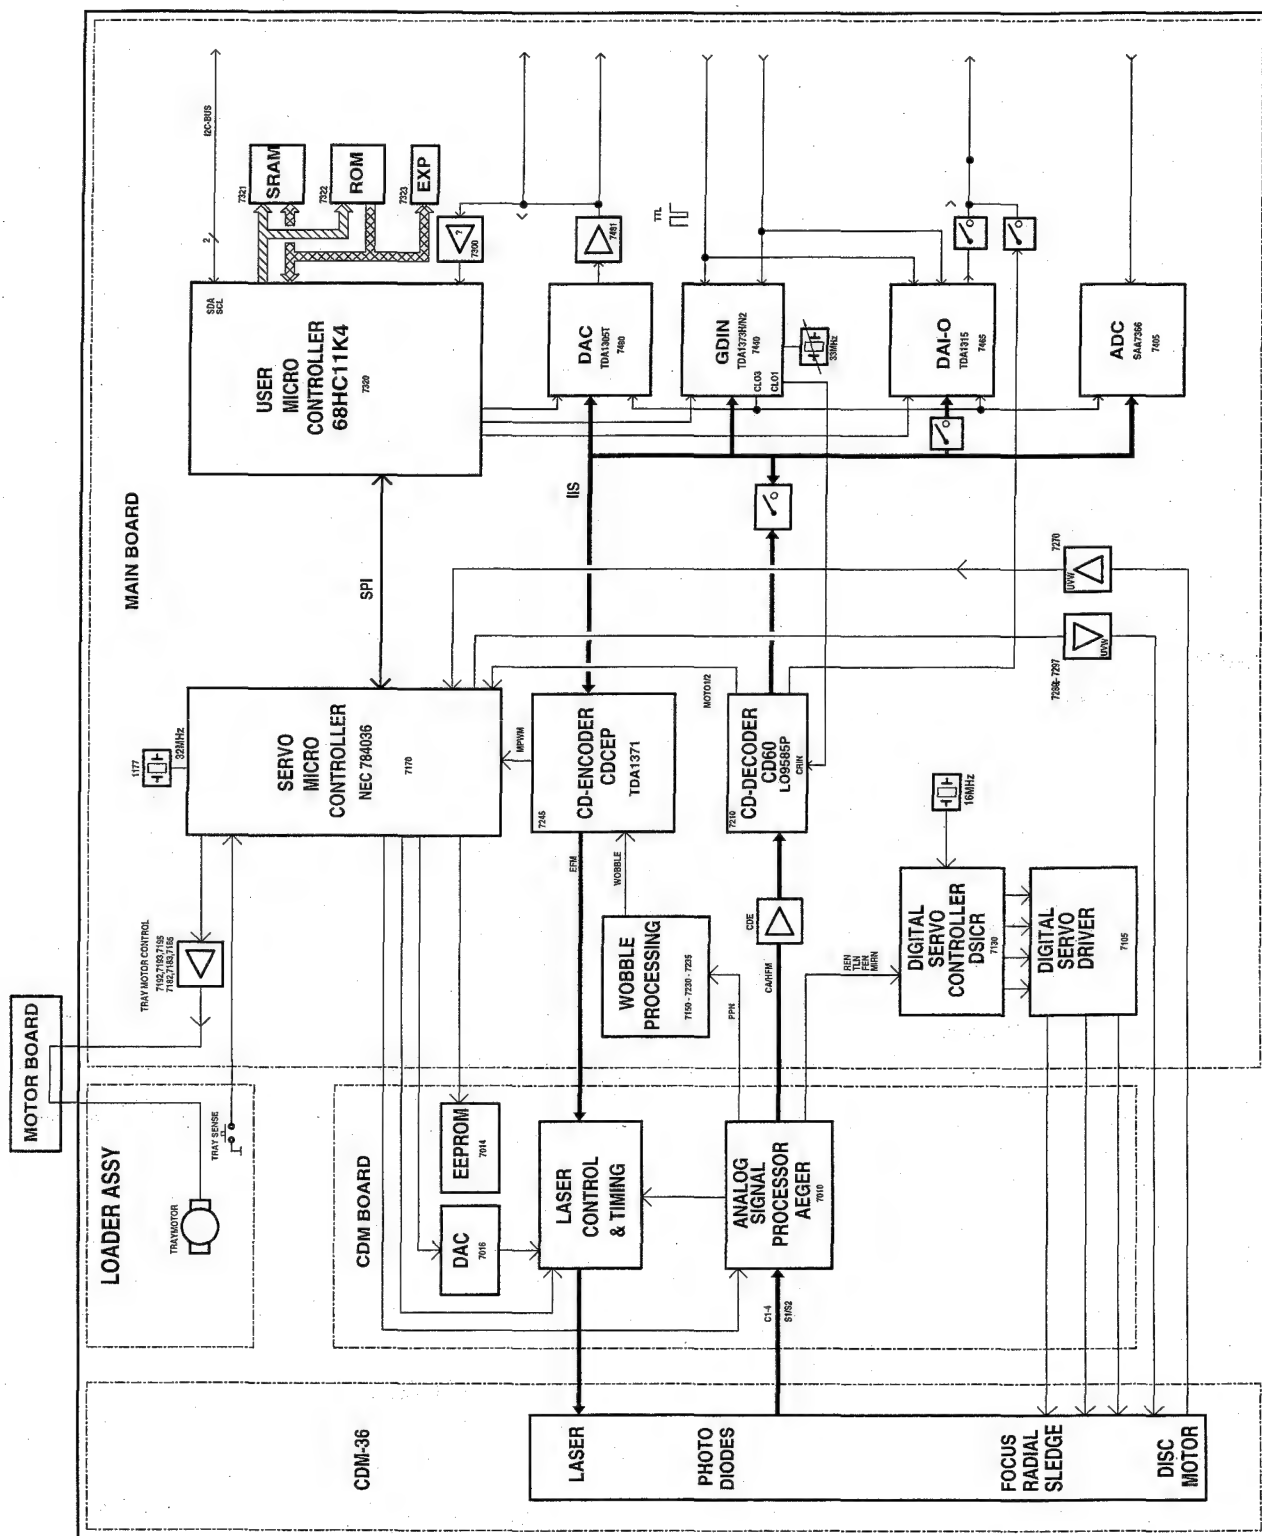

In addition, HDCD Precision Digital Filtering has the benefit of improving the sound of all digital recordings. This means that the Marantz DR-17, equipped with HDCD, will improve the sound of all digital recordings, whether mastered with HDCD or not.

MEASUREMENTS DISPLAY PANEL

1. Measurement of voltage supplies.

Several voltages arrive at the display PCB.
Measurements and limits.

Voltage	Nominal value	Limits
VFTD	-26V	$\pm 5\%$
VDC1-DC2	3.5V	$\pm 10\%$
+5Vd	5V	$\pm 5\%$

2. Measurement of oscillator.

As clock driver for the display controller a resonator of 8MHz is used.
The clock frequency is available at pin 8 of the display controller.
Check the frequency of 8MHz $\pm 5\%$.

3. Checking the control lines.

There are several lines which are inputs to the display controller and others which are outputs, these lines have to be checked to guarantee basic functionality.

RESETN:

This line should be kept low during power up for at least 3 machine cycles, with supply voltage within the operating range and oscillation stable. 1 machine cycle = $12 \times 1/F_c$ (8Mhz) Sec.

SDA and SCL:

The level on these two lines must be checked. When there is no communication they should have the 'High' level.

INTERRUPT:

The interrupt line is an output for the display controller. Check if this level is high after reset, no key pressed and no RC5 coming in.

Key matrix lines:

Check if at I/O port 4 of the controller all pins are high. (No keys pressed). (Pin 26 to 33). If not check respective pull-up resistors.

4. Operation of grid and segment control lines.

This figure shows the signal generated by the display processor on one of the grid lines. The level on the grid line changes from -26V to +5V.

The grid lines are scanned successively about every 950 μ sec.

SYMBOL	PIN	DESCRIPTION
DGND	1	0 V digital supply
V _{DDD}	2	5 V digital supply for both channels
IN R	3	serial one-bit data input for the right channel
n.c.	4	pin not connected; should preferably be connected to digital ground
CLK R	5	clock input for the right channel
V _{DDD R}	6	5 V digital supply for the right channel; this voltage determines the internal logic HIGH level in the right channel
V _{SSD R}	7	-3.5 V digital supply for the right channel; this voltage determines the internal logic LOW level in the right channel
V _{ref R}	8	-4 V reference voltage for the right channel switched capacitor DAC
AGND DAC R	9	0 V reference voltage for the right channel switched capacitor DAC; this pin should be connected to analog ground
-DAC R	10	output from the right negative switched capacitor DAC; feedback connection for the right negative operational amplifier
+DAC R	11	output from the right positive switched capacitor DAC; feedback connection for the right positive operational amplifier
AGND R	12	0 V reference voltage for both right channel operational amplifiers
n.c.	13	pin not connected; should preferably be connected to analog ground
+OUT R	14	+ output of the switched capacitor operational amplifier
-OUT R	15	- output of the switched capacitor operational amplifier
V _{SSA}	16	-5 V analog supply
V _{DDA}	17	5 V analog supply
-OUT L	18	- output of the switched capacitor operational amplifier

EPROM (7322)

This USER SOFTWARE has been stored in EPROM (7322). This EPROM, situated on the upper side of the Main Board of the CDR module, is in easy reach, once the tray is open. On the EPROM, you will find a sticker with the following indications :

MAIN DR-17
V.1.xx
7322

DR-17

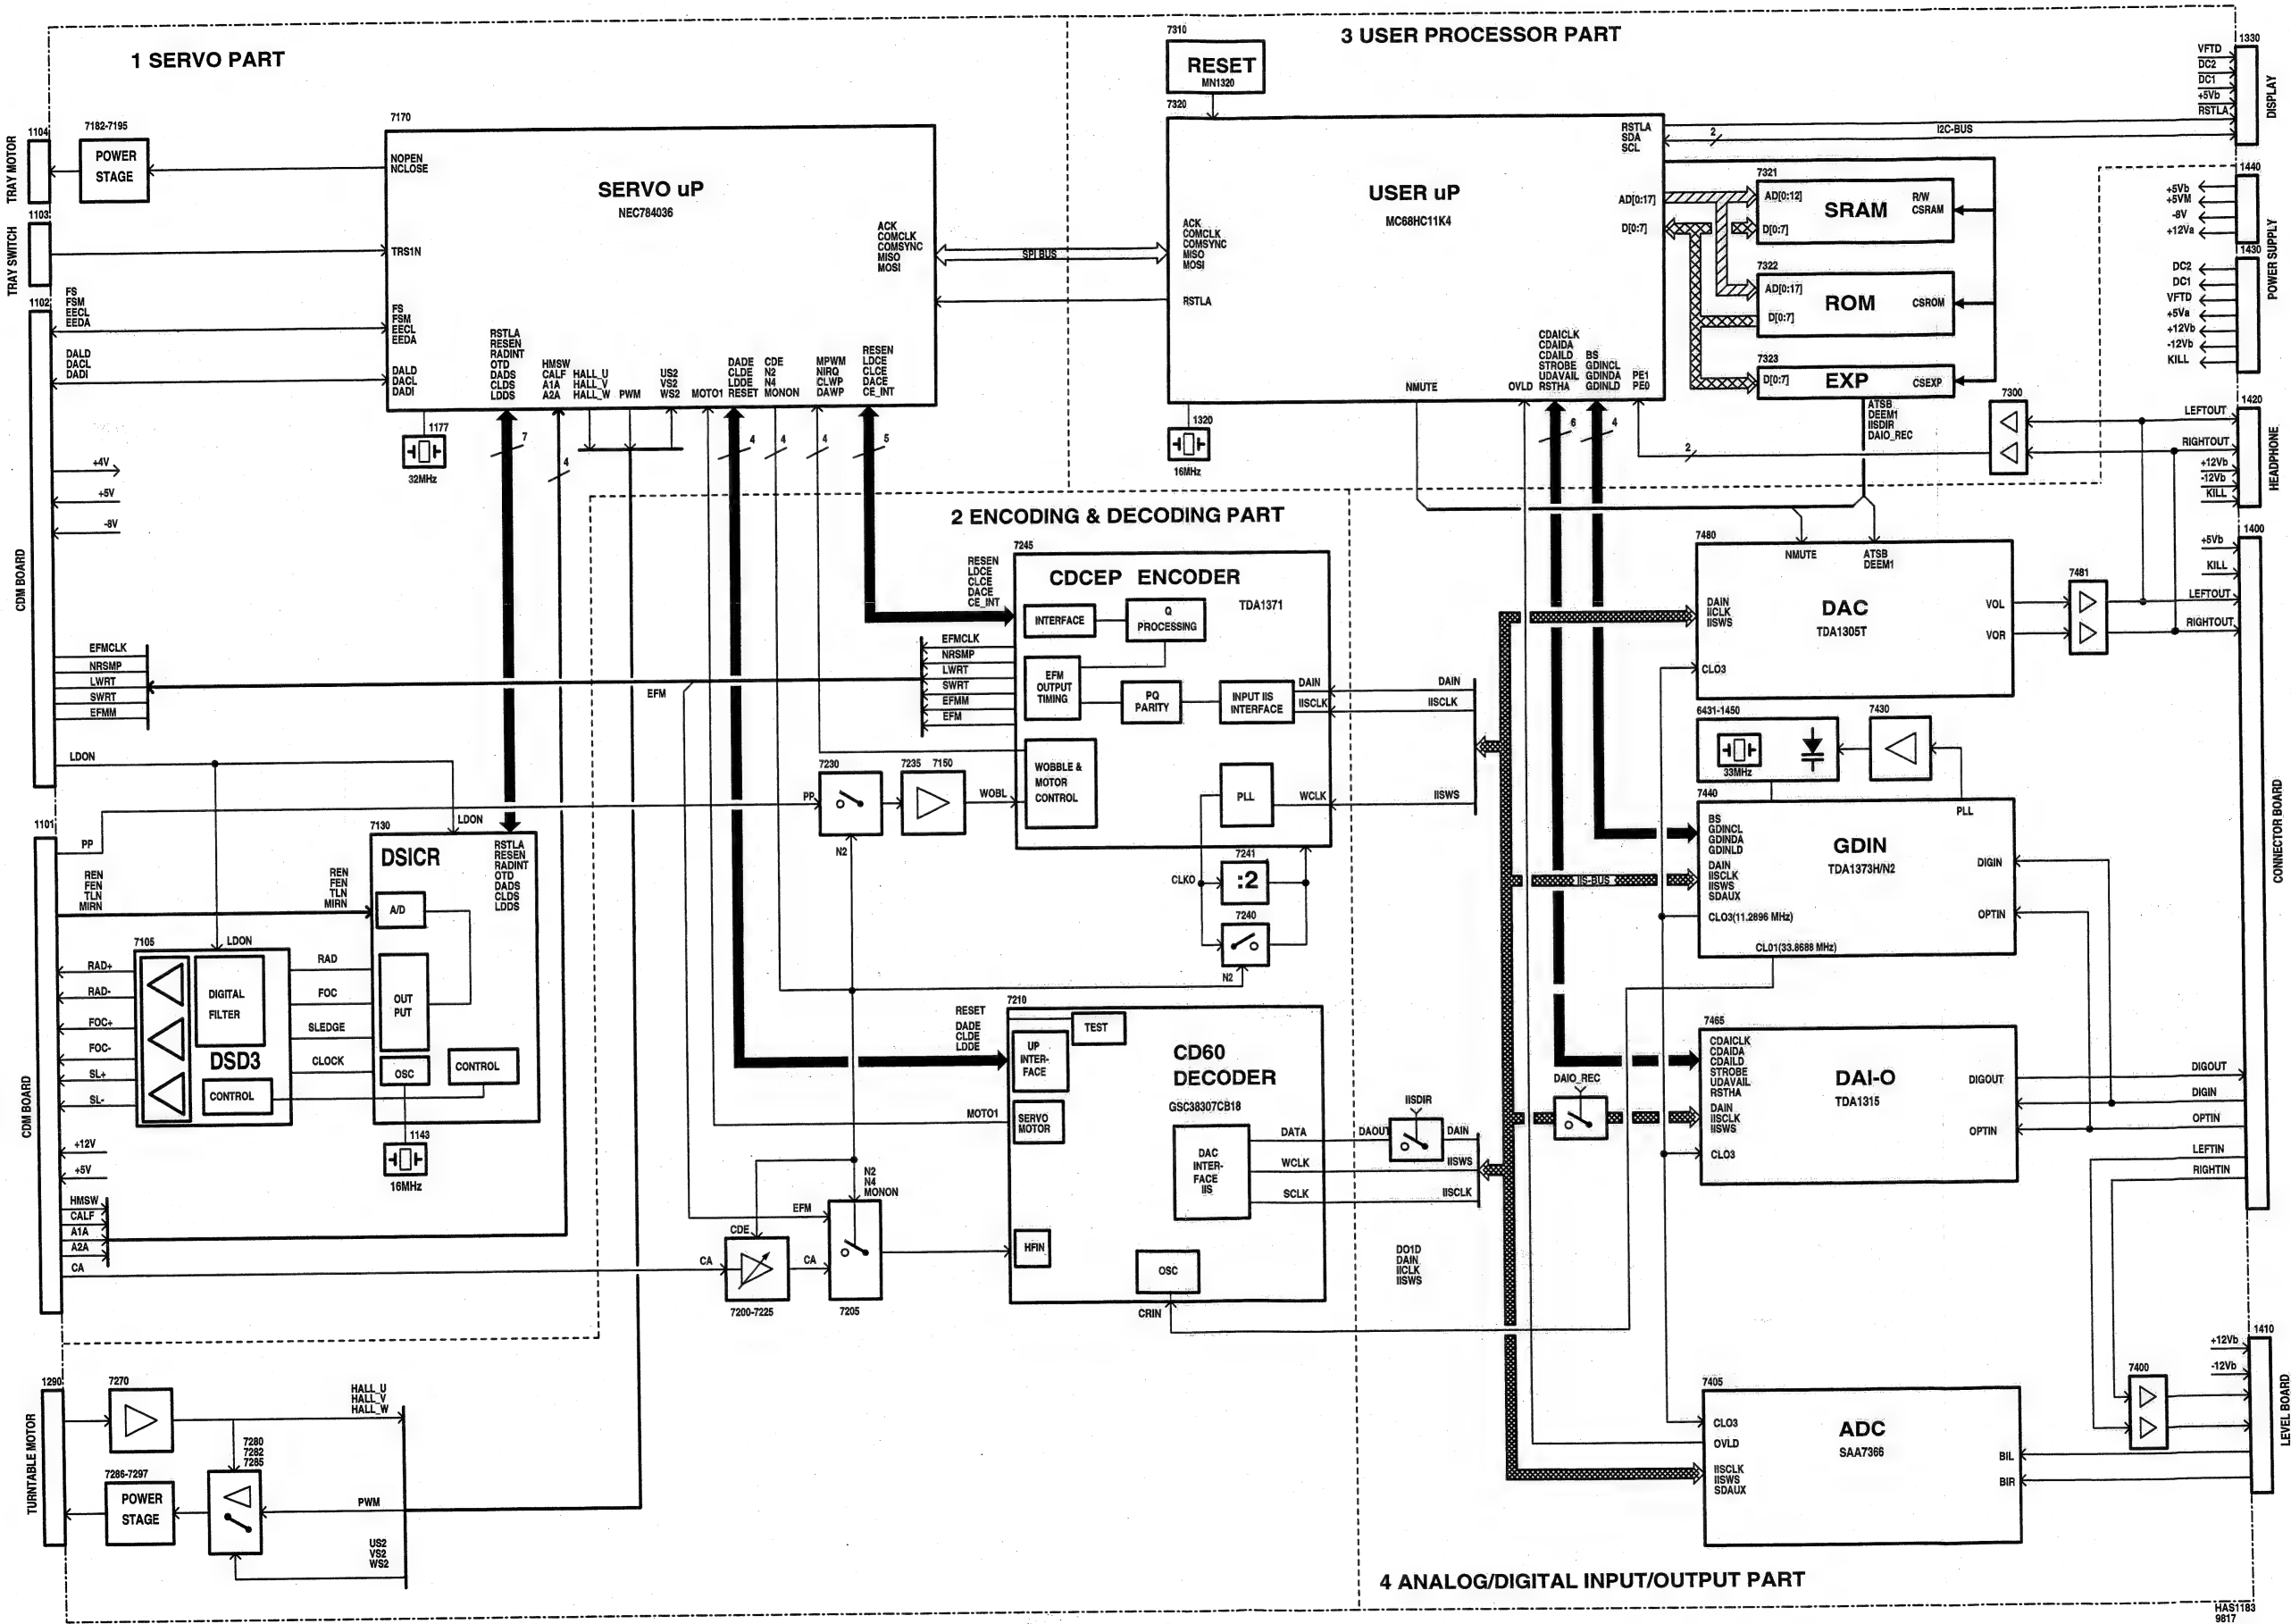

V.1.xx is the software version.

As this IC is mounted on a socket, it can easily be replaced an EPROM containing the last software version. This EPROM can be ordered with service code number ;

DR-17 : 4822 900 11335

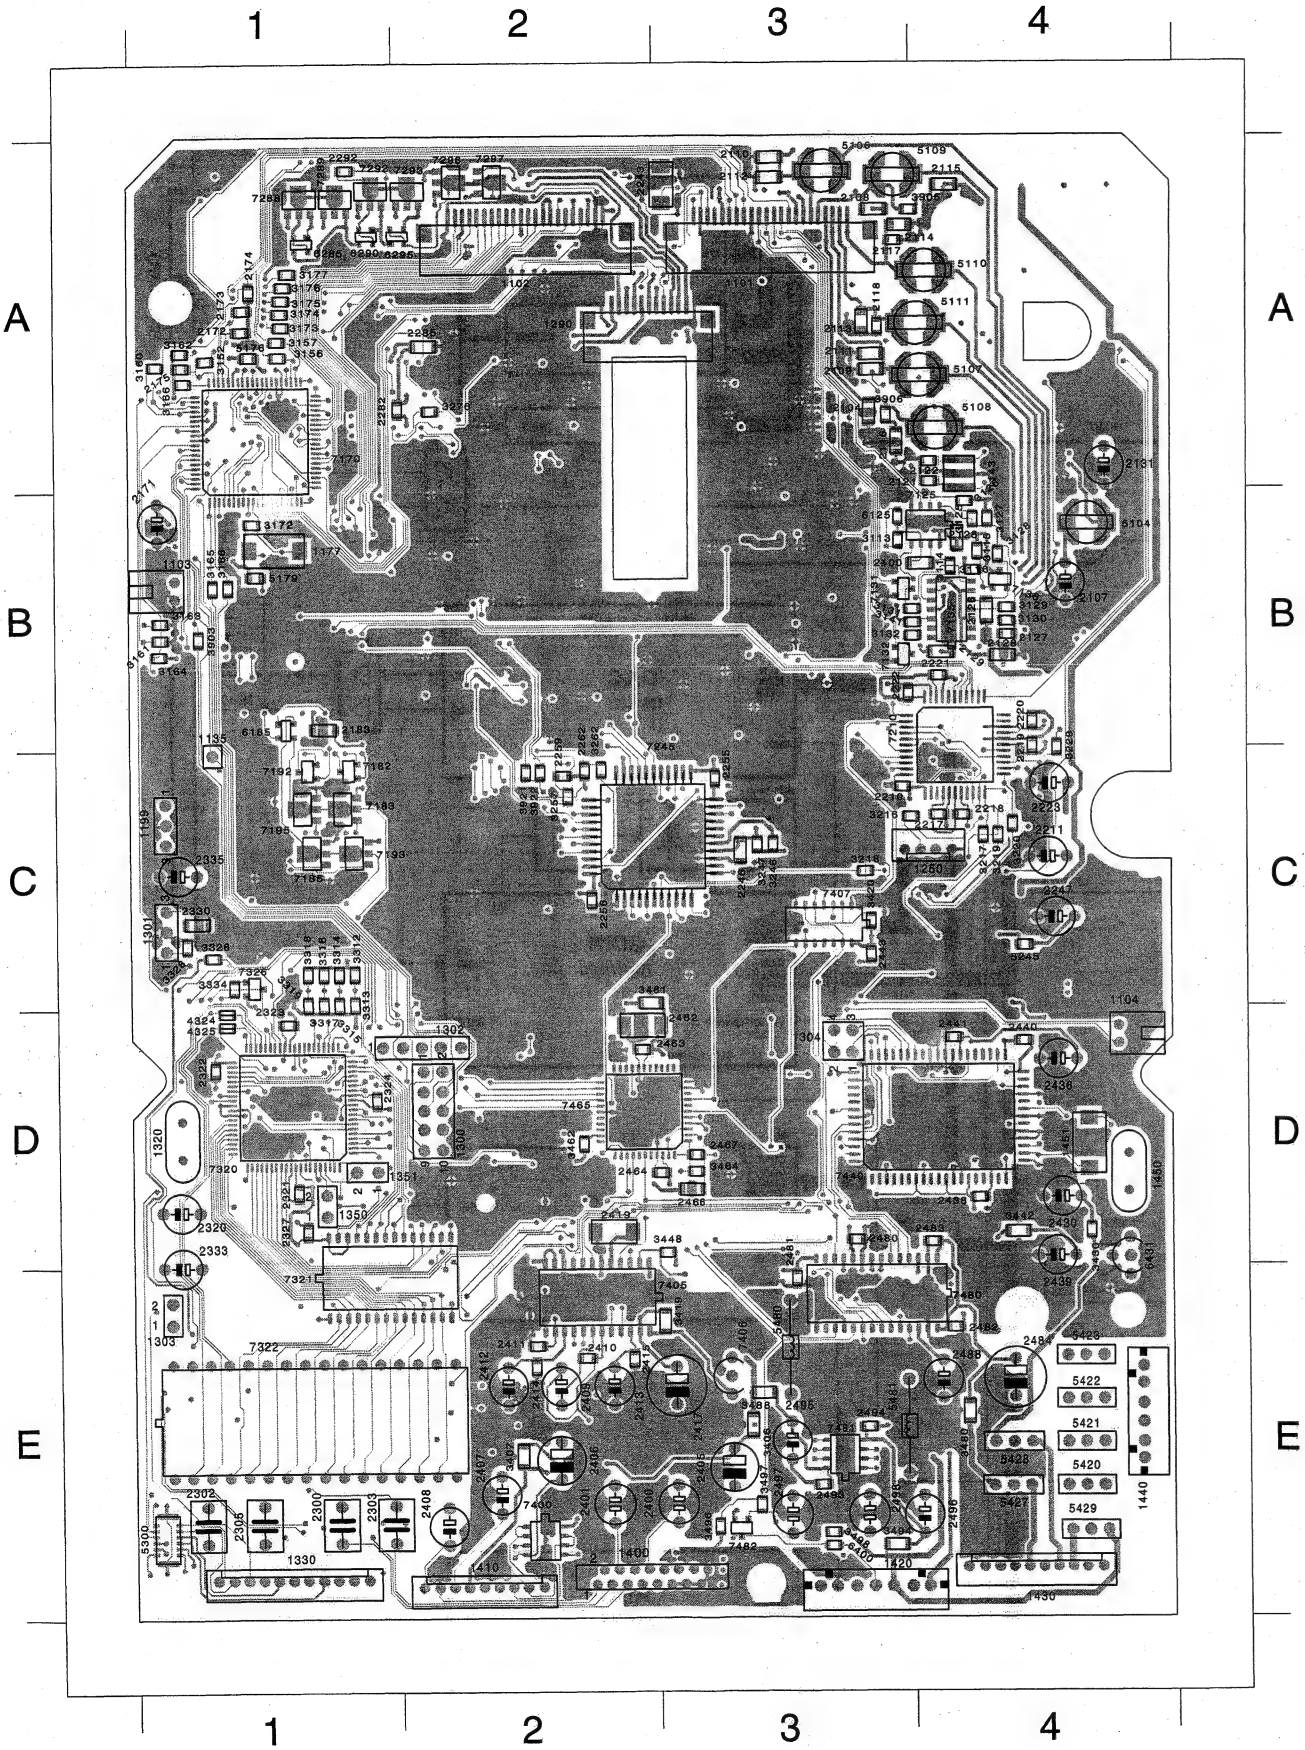

The latest software update information will be reported by the **SERVICE BULLETIN**.
(latest version EPROM will be supplied with same service code number always)
